

## Project Idea 1: Event Booking System (*Selected*)

### Project Name:

- Ticketo
- 

### Overview

The **Event Booking System** is a web-based platform that allows users to discover, search, and book tickets for upcoming events.

1. **Login & Registration:**
  - Users start at a secure login page.
  - They can log in with existing credentials or create a new account.
  - Invalid login attempts trigger error messages.
2. **Home Page:**
  - Upon successful login, users land on the **Home Page** which includes a general **Header** and **Footer** (likely consistent across all pages).
  - Displays the **top 10 upcoming events** ranked by rating.
  - Pagination is provided for smooth navigation.
3. **Search & Filters:**
  - A **search bar** is positioned in the center of the header.
  - Filters appear only after clicking on the filter button and are applied using an “Apply” button.
  - Searches require at least **3 characters** and results load on the **Search Page**, which includes pagination and the same header/footer.
4. **Event Details & Booking:**
  - Clicking on an event opens the **Event Page** with full details.
  - Users can click “**Book a Seat**” or “**Buy a Ticket**” which leads to the **Seat Page**.
  - Available seats are displayed with their prices.
5. **Payment:**
  - Clicking “**Select**” on a seat triggers a **payment popup**.
  - The **dummy payment system** includes basic card validation.
  - Users can **Cancel** or **Submit** payment.
  - A success message with a **Close (X)** button appears upon successful purchase.
  - Closing the popup refreshes the list of available tickets.
6. **Navigation:**
  - Clicking the website logo (top-left of the header) returns the user to the **Home Page** without any filters applied.

## Project Idea 2: Skill-Based Freelance Job Portal

### Overview

The **Skill-Based Freelance Job Portal** is a platform that connects freelancers and employers through skill-matching and project requirements.

1. **User Roles:**
  - **Freelancers:** Create profiles, showcase skills, portfolios, and set hourly/fixed rates.
  - **Clients:** Post jobs, define required skills, and set budgets.
2. **Matching System:**
  - An algorithm recommends freelancers based on skills, experience, and availability.
3. **Job Management:**
  - Clients can chat with freelancers, send offers, and manage ongoing tasks through a dashboard.
